

Cardox Blasting System

The Cardox blasting system is a safe effective way to clear blockages and hang-ups from bulk material handling systems.

It works by the power of rapidly expanding carbon dioxide which breaks stubborn, compacted material, safely and quickly.

It can break rock, concrete, and other materials that have become rock-hard.

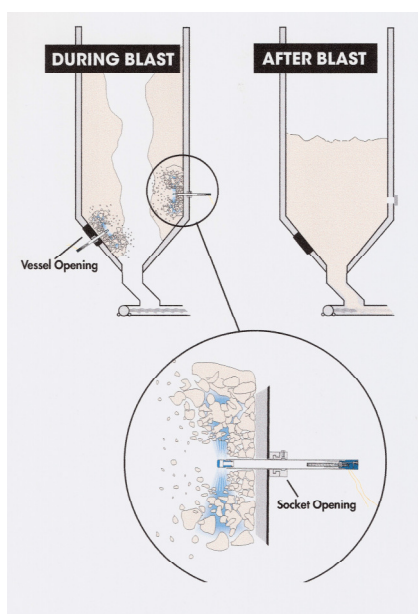

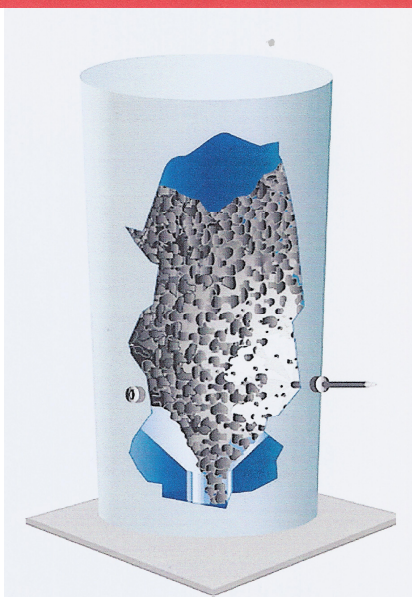

Vessel walls are not damaged in the process.

Cardox is cost effective, safe to transport, and designed to be reusable.

Does not produce any flame or heat.

HOW CARDOX WORKS

Innovative solutions for all your environmental needs
